                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Bource
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        (http://globin.cse.psu.edu/html/docs/sim4.html), gap2
(http://www.tigr.org/software/glimmerm/), BLASTN and BLASTX. The
genomic sequence was searched against NCBI NonRedundant Protein
database, nr (ttp://ncbi.nlm.nih.gov/blast/db) and the cDNA
database, nr (ttp://ncbi.nlm.nih.gov/blast/db) and the cDNA
sequence database at RGP or DDNJ. Protein homologies of the coding
regions were searched against NCBI NonRedundant Protein database
with BLASTP, ESTs represent the identified cDNA sequences using
BLASTN with the corresponding DDBJ accession no. and RGP clone ID.
Full-length cDNAs represent the identified cDNA sequences using
BLASTN with the corresponding DDBJ accession no.
A gene with identity or significant homology to a protein is
classified based on the protein name to indicate the homology level
such as same name, 'putative-' and '-like protein'. A gene without
significant homology to any protein but with full-length cDNA or
EST homology (covering almost the entire length of partial
sequence) is classified as an 'unknown' protein. A gene predicted
by two or more gene prediction programs is classified as a
'hypothetical' protein according to IRGSP standard. A gene
predicted by a single gene prediction program is also classified as
a probable 'hypothetical' protein and is included as a
miscellaneous feature of the sequence.
The orientation of the sequence is from -21M13 to M13rev of the BAC
clone. This sequence of 001793 E31 clone has an overlap with
OSJNBa0036M16 (DDBJ: AP005303) clone at 5' end and with 031657 A07
(DDBJ: AP003930) at 3' end. The sequence was generated by combining
Monsanto and RGP-Japan sequencing data. Detailed information on
overlap and assembly quality together with annotation of this entry

On Sep 23, 2002 this sequence version replaced gi:21737475.
The sequence in this assembly is a combination of BAC based reads and whole genome shotgun sequencing reads assembled using Atlas (http://www.hgsc.bcm.tmc.edu/projects/rat/). Each contig described in the feature table below represents a scaffold in the Atlas assembly (a 'contig-scaffold'). Within each contig-scaffold, individual sequence contigs are ordered and oriented, and separated by sized gaps filled with Ns to the estimated size. The sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                         Submitted (19-FBB-2002) Human Genome Sequencing Center, Department of Molecular and Human Genetics, Baylor College of Medicine, One Baylor Plaza, Houston, TX 77030, USA (bases 1 to 271370)

NOTE: This is a 'working draft' sequence. It currently consists of 3 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Current sequence finishing criteria for the C. elegans genome sequencing consortium are that all bases are either sequenced unambiguously on both strands, or on a single strand with both a dye primer and dye terminator reaction, from distinct subclones. Exceptions are indicated by an explicit note. For a graphical representation of this sequence and its analysis see: http://wormbase.sanger.ac.uk/perl/ace/elegans/seq/sequence?name=W06A?
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       neighbouring submissions.

The true left end of clone W06A7 is at 1 in this sequence. The true right end of clone W06A7 is at 9975 in sequence 278067.

The true left end of clone ZC412 is at 27138 in this sequence. The true right end of clone C48G7 is at 10917 in this sequence. The true right end of clone C48G7 is at 10917 in this sequence. The true right end of clone C48G7 is at 10917 in this sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   the specified clone. It may be shorter because we only sequence overlapping sections once, or longer because we arrange for a small overlap between neighbouring submissions.

IMPORTANT: This sequence is not the entire insert of clone W06A7. It may be shorter because we only sequence overlapping sections once, or longer because we arrange for a small overlap between
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Submitted (09-AUG-1996) Nematode Sequencing Project, Sanger Institute, Hinxton, Cambridge CB10 1SA, England and Department of Genetics, Washington University, St. Louis, MO 63110, USA. E-mail: jes@anger.ac.uk or rw@nematode.wustl.edu Coding sequences below are predicted from computer analysis, using predictions from Genefinder (P. Green, U. Washington), and other available information.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     none.

Nucleic acid encoding heat stable esterase from thermophilic bacteria - which is active in organic solvents, useful in cheese or paper manufacture, and to study plant resistance to disease.

Disclosure; Page 63-64; 113pp; English.

This DNA sequence codes for LA11.1 esterase es2 (AAW23078). Newly identified polynucleotides (AAW79321-40) encoding esterases (AAW23069-88), some of which are claimed, can be used for recombinant production of the enzymes in host cells, and as probes to identify related sequences. The esterases are stable at high temperature and in organic solvents, making them superior for use in production of pure chiral compounds used in pharmaceutical, agricultural and other chemical industries.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           The present invention relates to a method (M1) for identifying genes involved in plant resistance or response to pathogenic infection. M1 comprises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. (M1) is useful for conferring resistance to resistance or tolerance to a plant to bacterial, fungal or viral infection. The present sequence was used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          gene expression.

                                                                         밁
                                                                                                        Ś
                                                                                                                                                                                                                                                       The invention relates to a nucleic acid comprising a sequence of 18 CC bases, of a segment of chemically pretreated DNA (CP DNA) e.g. with CP bisulphite, of genes associated with tumour suppression and oncogenes CC having a sequence taken from 536 (actually 533 since numbers 408, 458 and CC 500 are missing from the sequence listing) sequences (Ss) and sequences CC complementary to (Ss). The nucleic acid may be a peptide nucleic acid. CC oligomer (PNA) of at least 9 nucleotides and may form part of a set of CC probes for detecting the cycosine methylation state and/or single CC nucleotide polymorphisms and also be used in an array for analysing CC diseases associated with CpG dinucleotides e.g. cancers and tumours. The probes can also be used in a method for ascertaining genetic and/or CC epigenetic parameters for the diagnosis and/or therapy of existing CC diseases or the predisposition to specific diseases, by analysing CC cytosine methylations. The parameters may be compared to another set of CC genetic and/or epigenetic parameters, the differences serving as basis CC for diagnosis and/or prognosis events which are disadvantageous to CC data for this patent did not form part of the 533 genomic sequence CC data for this patent did not form part of the printed specification, but CC was obtained in electronic format directly from WIPO at

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              5
                                                                                                                                                                                                                                                                                                                                                                                                       This invention describes a novel reagent for diagnosis, molecular conditions and therapy of chronic inflammatory joint diseases, and other inflammatory disorders, infective or tumour diseases in humans. The products of the invention have antiinflammatory, cytostatic, antirheumatic and immunosuppressive activity and can be used for gene therapy. The reagent of the invention and any proteins and can be used for medical diagnosis; (ii) for diagnosis and characterisation of chronic joint diseases, on the basis of molecular characterisation, and chronic joint diseases, on the basis of molecular characterisation, and cetermining the etiological pathogenicity principle of as yet uncharacterised inflammatory diseases, also monitoring progression and/or treatment of disease, and optimisation of therapy and (iii) for diseases, and optimisation of therapy and (iii) for continuous of disease, and optimisation of therapy and continuous. ACA64801-ACA64965 represent human polynucleotides used in the method of the invention

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              밁
The sequence is that of an ambiguity-maximised human telomerase protein coding sequence. The sequence, or specific fragments of it, can be used to modulate expression of a telomerase transcript (by hybridising to it intracellularly), e.g. for treatment or prevention of cancer, restenosis, conflammation, myocardial infarction, glomerulonephritis, transplant cripetion and infections (e.g. with human immunodeficiency virus). It can be used to express recombinant telomerase protein which can be used to be used to express recombinant telomerase protein which can be used to telomerase to its binding target. Those that inhibit telomerase activity can be used to treat the conditions listed above, while those that are caponists can be used to extend the life of proliferation-restricted caponists can be used to extend the life of proliferation-restricted calls, especially normal somatic cells, e.g. in cases of hypersensitivity or atrophy, also to improve production of recombinant proteins by calling used for bone marrow transplants. They may also be used for bone marrow transplants. They may also be used for diagnosis, Other uses of telomerase proteins are isolation, enrichment capacity, as reagent where nascent oligonucleotides of known structure are regulating cell growth/density tolerance. The agents and the telomerase considerations should be very specific, e.g. they are selective for cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  telomerase; p105; treatment; prevention; cancer; restenosis; inflammation; myocardial infarction; glomerulonephritis; transplant; rejection; infection; HIV; human immunodeficiency virus; bone marrow transplants; proliferation-restricted cells;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             AAV13834;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 AAV13834 standard;
                                                                                                                                                                                                                                                                                                                                                                                                                                                          New nucleic acid encoding human telomerase protein p105 or its i - used for therapeutic modulation of telomerase activity and for screening for potential modulators of telomerase-target binding.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         WPI; 1998-101044/09.

This polynucleotide comprises a synthetic, ambiguity-maximised DNA coding for the p105 subunit (see AAW46593) of human telomerase. It is based on an isolated cDNA clone (see AAV05369) for p105 and encompasses all possible nucleic acids encoding the full-length protein. The invention provides methods relating to human telomerase and related nucleic acids, including the subunit proteins p140, p105, p48 and p43. The proteins may be produced recombinantly from transformed host cells or purified from human cells. Also included are human telomerase RNA (see AAV05373) and functional derivatives (see AAV05374 and AAV16092-93), as well as p105 synthetic DNA sequences (AAV05370-72). The invention also provides isolated telomerase hybridisation probes and primers capable of specifically hybridising with the telomerase gene, telomerase specific binding agents such as specific antibodies, and methods of making and using the subject compositions in diagnosis (e.g. genetic hybridisation
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Sequence 2277
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        cells without harming somatic cells
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New nucleic acid encoding human telomerase proteins or their frouseful for therapeutic modulation of telomerase activity and for screening for potential modulators of telomerase-target binding
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            AAV05370

The present invention relates to a method (M1) for identifying genes involved in plant resistance or response to pathogenic infection. M1 comprises identifying a gene whose expression is significantly altered in the incompatible interaction of plant gene expression relative to expression of the gene in an uninfected plant, in a mutant plant that does not express a gene associated with response to pathogenic infection, or in a corresponding incompatible or compatible interaction. (M1) is useful for conferring resistance to resistance or tolerance to a plant to bacterial, fungal or viral infection. The present sequence was used to
                                                                                                                                                                                                                                                                                                                                                                                                                                                               Chang H,

The invention relates to an isolated nucleic acid comprising any one of CC the 6213 antisense sequences given in the specification where expression CC (1) a vector comprising a promoter operably linked to the nucleic acid inhibits proliferation of a cell. Also included are: CC (1) a vector comprising a promoter operably linked to the nucleic acid (2) an bost cell containing the vector; (3) an isolated CC encoding a polypeptide whose expression is inhibited by the antisense CC entisense nucleic acid; (4) an antibody capable of specifically binding CC the polypeptide; (5) producing the polypeptide; (6) inhibiting cellular CC proliferation or the activity of a gene in an operon required for CC the gene product or that has an activity against a biological pathway CC required for proliferation, or that inhibits cellular proliferation of the test compound that influences the activity of CC identifying a gene required for cellular proliferation or the biological pathway in which a proliferation-required gene or its gene product lies CC oraginism acts; (9) manufacturing an antibiots proliferation of an CC compound's activity; (11) a culture comprising strains in which the gene CC product is overexpressed or underexpressed; (12) determining the extent CC which each of the strains is present in a culture or collection of CC strains; or (13) identifying the target of a compound that inhibits the extent CC which each of the strains is present in a culture or collection of CC strains; or of or screening homologous nucleic acids are useful for cellular proliferation in cells other than S. aureus, S. typhimurium, CC identifying cessential genes. Note: The sequence data for this patent did celectronic format directly from WIPO at CC for provider acids are useful cellular proliferation in cells other than S. aureus, S. typhimurium, CC in the proliferation of the printed specification, but was obtained in
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Claim 14; SEQ ID NO 18072; 1766pp; English.

                                                                                                                                                                                                                                                                                                                                                                     The present sequence is one of a number of isolated polynucleotides which encode polypeptides involved in olfactory sensation. The polynucleotides can be used in screening for olfactory agonists and antagonists. The methods allow for the determination of primary scents and the identification of the odour receptors used to detect these primary scents and the identification of combinations of odour receptors that are involved in detecting such secondary scents. This enables the construction of a scent representation (also called a scent fingerprint or scent profile), which may be used to re-create and edit scents. Libraries of olfactory receptors are useful for determining the interaction pattern of a composition with the receptors, and can be used for determining the interaction pattern of a difference in the olfactory, and can be used for determining
                                                                                                                                                                                                                                                                                               Sequence 936 BP;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              New polynucleotides which encode polypeptides involved in olf sensation for identifying olfactory agonists and antagonists.

A composition comprising the S. aureus protein, a nucleic acid encoding the protein, or an antibody to the protein, is useful as a pharmaceutical, particularly as a vaccine for treating or preventing infection due to Staphylococcus bacteria, specifically an infection caused by S. aureus. The composition is particularly useful for treating or preventing sepsis in a partient. The composition can also be used for diagnostics. The protein is also used in an assay for enzymatic studies and as a target for antibiotics. This sequence represents one of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New Staphylococcus aureus protein, useful as a vaccine for treating or preventing Staphylococcal infection, specifically an infection caused \delta, aureus, e.g. sepsis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              27-MAR-2002; 2002WO-IB002637.

The invention relates to 1 of 33 isolated or recombinant polynucleotides encoding an Arabidopsis thaliana transcription factor, their variants, CC complements, fragments, or related polynucleotide with 31% to 95% CC sequence identity, where the plant possesses an altered trait as compared to a wild-type or reference plant, or the plant exhibits an altered cexhibits ectopic expression or altered expression of one or more genes can associated with a plant trait as compared to a wild plant. Also included are a transgenic plant comprising the polynucleotides, a computer creadable medium having stored sequence information, and identifying a homologue sequence from a database comprising a plurality of known plant encombinant polynucleotide is used for producing a plant having a computed or recombinant polynucleotide or an antisense nucleic acid, inserting the polynucleotide or antisense nucleic acid, inserting the polynucleotide or antisense nucleic acid, inserting the computation, and selecting the vector into a plant or a cell of a plant to overexpress the polynucleotide or antisense nucleic acid, inserting the polynucleotide or antisense nucleic acid, inserting the compise of a selecting a polynucleotide that the polypeptide or an antisense nucleic acid, inserting the polynucleotide or antisense nucleic acid, interest production of agriculturally useful proteins or metabolic chemicals, pest tolerance, environmental stress response (e.g. drought), microbial disease environmental stress response (e.g. drought), microbial disease condition and flower sensecuce is one of the 232 polynucleotides encoding an A.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Pilgrim
Adam L,
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Plant; ss; gene; transcription factor; transgenic; agriculture; metabolic chemical; environmental stress; drought; microbial disease resistance; herbicide resistance; seed yield; fruit yield; growth rate; leaf senescence; flower senescence.

information supplied to Derwent by the European Patent Office	\$88
in methods of the invention. Note: The sequence data for this patent is	38
an Arabidopsis thaliana stress regulated gene (ABZ12196-ABZ17574) us	88
production of transgenic plants, cells and seeds and in producing plants with increased tolerance to abiotic stress. The present sequence is that	3 8
characteristic of a stress response. The method is useful in the	88
array or probes representative of the plant cell genome; and (b) derecting a profile of expressed polymiclectides in the plant cell	388
The invention relates to identifying a stress condition to which a plant cell has been exposed, comprising: (a) contacting nucleic acid	888
Claim 144; SEQ ID NO 1790; 577pp + Sequence Listing; English.	X X
Identifying a stress condition to which a plant cell has been exposed and producing plants with increased tolerance to these abiotic stresses.	K K K

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       geq

/note="Organ: lung; Vector: pDNR-LIB (Clontech); Site_1:
Sfil (ggcggcctggcc); Site_2: Sfil (ggccattatggcc);
Double-stranded cDNA was prepared from cell line RNA. 5'
and 3' adaptors were used in cloming as follows: 5'
adaptor sequence: 5'-CACGGCCATTATGGCC-3' and 3' adaptor
sequence: 5'-ATTCTAGAGGCGAGGCGGACATG-dT(30)BN-3'
(where B = A, C, or G and N = A, C, G, or T). Average
insert size 1.65 kb (range 0.9-4.0 kb). 15/15 colonies
contained inserts by PCR. This library was enriched for
full-length clones and was constructed by Clontech
Laboratories (Palo Alto, CA). Note: this is a NIH_MGC
Library."

/clone_Togan: Leaf; Vector: pDNR; Site_1: Sfit; Site_2:
Sfit; CA12LI is a cDNA library of Cabbrnet Sauvignon_
leaves. The leaves were collected on September 20, 2001,
in Napa Valley, California, and represent leaves in late
season development. These leaves were symptomatic and
verified to be infected with the bacterial pathogen,
Xylella fastidiosa, based on a diagnostic assay using PCR
and Xylella-specific primer pairs. cDNAs were made by
oligo-off priming and directionally cloned. 5' and 3'
adaptors were used in cloning as follows:
5'-ANACAGTGGTATCAACGCAGAGTGGCCATTACGGCCGG-3' and
5'-ANACCAGTGGCTATCAACGCAGAGTGGCCATTACGGCCGG-3'. Library was
constructed using the Clontech Creator SWART kit and
size-selected to contain the 0.5-3 kb size fraction."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              /clone="CA12LIIO4IIF_H11"

RNA was isolated from mycelium of P. infestans DDR7602
cultured for 4 weeks in synthetic medium. EST clones were
named by their position in the microtiter plate, preceded
by the prefix MY (for mycelial) and the successive number
of the microtiter plate (e.g. MY-06-A-04)."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        /dev stage="4-week old vegetative, non-sporulating mycelium in synthetic medium"
